

K2C

LOCK BREAK-IN KIT

This kit allows you to breach a door with little or no destruction to the door leaf. It does still require some force.

The technique to be used is simple, requires limited equipment and training, and takes less than a minute.

This kit is suitable for the vast majority of European cylinders. It allows the removal of 3mm apparent cylinders (it may be necessary to remove the decorative protective plate around the cylinder).

Created by firefighters for emergency services. The equipment is compact and easy to use, allowing it to be used in a variety of settings (rescue, fire and other interventions).

The procedure does not require any additional tools than what the kit already contains.

► REF: PPSOK2CA
