

NEW!

JALAS® TIO COLLECTION

WALK ON AIR

A new technology with micro airbubbles in the sole

jalas®

THE NEW JALAS® THREE IN ONE TECHNOLOGY FOR SOFTNESS AND STABILITY

Very soft and very stable may sound like a contradiction. However, the innovative JALAS® TIO technology enables us to produce very soft – and stable – shoes that withstand long working days without causing fatigue and pain. The soles have a JALAS® ComSoft Air™ material with micro air bubbles that give the shoes long-lasting softness, lightness and good slip resistance. It's time you try the feeling of walking on air!

STABILITY TO PROTECT YOUR BACK AND KNEES

- More dense to give greater stability.
- Higher sides give extra stability.
- Preventing twisting of the foot.

SOFTNESS FOR ULTIMATE COMFORT

- JALAS® ComSoft Air™ material.
- Micro air bubbles provide long-lasting super softness.
- Shock absorbing to save back, knees and feet.
- The shape of the sole makes the step soft and creates forward energy.

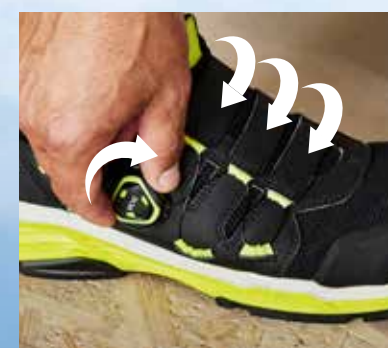

SLIP RESISTANCE TO WALK SAFELY

- The micro air bubbles create “suction cups” for slip resistance and excellent grip on slippery, wet and oily surfaces.
- Very durable and exerts exceptional grip even when worn.

THE JALAS® COMSOFT AIR™ MATERIAL

The micro air bubbles in the Three In One sole bring extraordinary softness and comfort. When you walk – you actually walk on air!

NEW LOOK, NEW FEEL WITH THE TRI-PANEL BOA® FIT SYSTEM

Turn and tighten

A gentle and soft tightening eliminates pressure points and allows assymetric closure to adapt to your individual foot shape.

Gentle fixation

Locks the foot comfortably in place and gives stability.

Comfort all day

Comfort and performance that lasts all day for relaxed feet.

A CLOSER LOOK AT JALAS® TIO

TIO STANDS FOR THREE IN ONE.
A UNIQUE NEW OUTSOLE MADE IN THREE LAYERS.

STAY SAFE AND COMFORTABLE

The JALAS® TIO Technology together with the new Tri-Panel BOA® Fit System is of course combined with all the other premium features you get with JALAS® – features that keep you safe and comfortable and give you energy throughout your working day:

IF YOUR SHOES ARE COMFORTABLE, SO ARE YOU

The sock-like construction makes the shoes very soft and comfortable and easy to put on and take off. The overall low weight of the shoes saves you energy.

GREAT ERGONOMICS KEEP YOU COMFORTABLE ALL DAY

The excellent ergonomics help to prevent muscle fatigue and injuries. The front and back of the shoes are well balanced. This is very important for the overall comfort.

JALAS® UNIQUE OUTSOLE SUPPORTS YOU IN YOUR WORK ENVIRONMENT

All JALAS® shoes have a stabilizing arch support that secures grip on ladders. A conical profile makes dirt and mud fall off. Liquids flow away with the help of drainage channels.

THE SHOES PROTECT YOU FROM COMMON INJURIES

Toe protection in lightweight aluminum. Soft and flexible nail penetration insert in textile material protects against sharp objects on the ground.

NEW FX3 SOFT INSOLE FOR ULTIMATE COMFORT

The softness and comfort of the shoes is even better due to the new insole with an extra soft layer and two zones of shock absorbing Poron® XRD®, the high tech material that absorbs 90% of the energy on impact. The insole's C² Climate control function, including ventilation holes and channels, ensures your feet stay cool.

WHEN SOFT IS NOT ENOUGH

Because work involves both walking and standing, the footwear stability is important to prevent muscle fatigue in your body.

Stability in our TIO shoes is provided by the white layer of the outsole as well as by a shank piece inside the shoe. Add on the softness – derived from the micro air bubbles – and your long working days will be really comfortable.

LIKE WALKING ON AIR

It doesn't matter how much we try to explain the comfort and softness of the JALAS® TIO-shoes. They have to be experienced! Take a closer look at our three new models.

JALAS® 2028 TIO

Low-cut safety shoe, with water repellent upper and BOA® Fit System on the sides.

JALAS® 2058 TIO
